GENERAL APPLICATIONS INSTRUCTIONS	1. Check speed range, pressure, temperature, fluid quality, viscosity and pump rotation.	
	2. Check inlet conditions of the pump, if it can accept application requirement.	
	3. Type of shaft : if would support operating torque.	
	4. Coupling must be chosen to minimize pump shaft load (weight, misalignment).	
	5. Filtration : must be adequate for lowest contamination level.	
	6. Environment of pump : avoid noise reflection, pollution and shocks.

INTERNAL LEAKAGE (TYPICAL)

NOISE LEVEL (TYPICAL) SDV10 - 6

Do not operate pump more than 5 seconds at any speed or viscosity if internal leakage is higher than 50% of theoretical flow. Total leakage is the sum of each section loss at its operating conditions.

INTERNAL LEAKAGE (TYPICAL)

**NOISE LEVEL (TYPICAL)
SDV2010 - 13 - 6**

Do not operate pump more than 5 seconds at any speed or viscosity if internal leakage is higher than 50% of theoretical flow. Total leakage is the sum of each section loss at its operating conditions.

Double pump noise level is given with each section discharging at the pressure noted on the curve.
